

Single Colour EcoFlex 12v & ProFlex 24v

Connect the flex to the output terminals of the PSU as shown.

The flex can be cut and joined as required at the at marked cutting points to a maximum length of 5m.

To connect longer lengths of flex, run a further supply from the PSU (as shown) to each 5m length of flex, taking care not to exceed the overall maximum length of flex for the PSU.

Note: Up to 40m of 2 core 2.5mm sq cable can be connected between the PSU and the 12v EcoFlex and up to 75m of cable to the 24v ProFlex if required.

Connect the PSU to a suitable 240v mains supply to power the flex
