DarkMatters Quick Start Guide

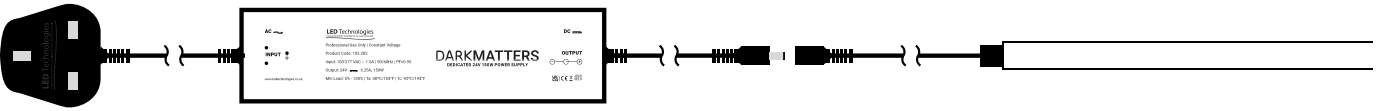

Thank you! For purchasing DarkMatters. This guide will help you get set up quickly and safely so you can enjoy your new lighting system straight away.

Looking to refresh?

With the ease of which DarkMatters can be installed and removed it is easy to swap out the colours to change the theme to suit your mood, taste or the season.

Most Simple Set Up

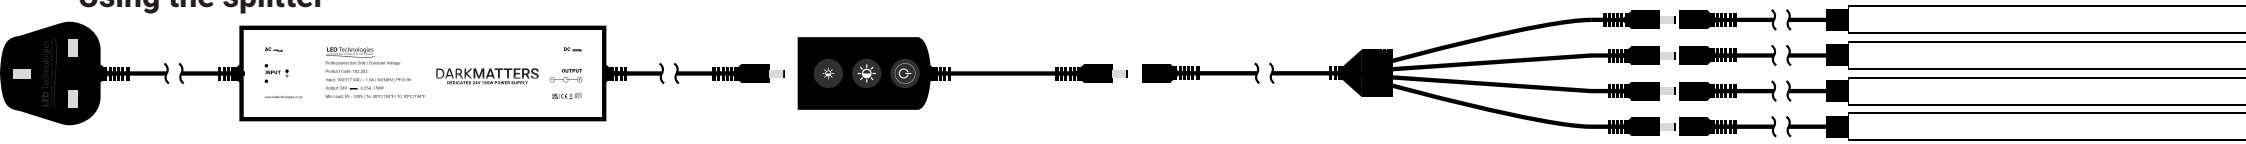

The only way to connect your DarkMatters Neon is using the pre-attached push barrel connectors. Make sure the power supply is switched off before connecting. Simply plug the connectors into the power supply. There is no need to force them. When you switch on the power at the wall, the Neon will light instantly at full brightness.

Recommended Set Up

For more control, place the inline dimmer between the power supply and the DarkMatters Neon. This lets you turn the strip on or off and adjust brightness as needed. You can also add WiFi or Tuya control for smartphone operation. The dimmer can be paired with our dedicated RF remotes for easy wireless control.

Using the splitter

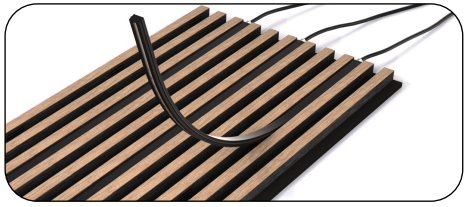

Plug up to four neon strips into the splitter, then connect the splitter to the dimmer. This lets you dim all four strips together. Do not chain splitters together.

Installation Methods

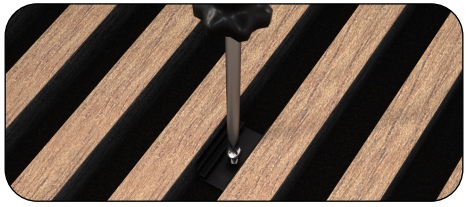

You can install DarkMatters either by friction fit or using brackets, depending on your slat wall gap.

Friction fit

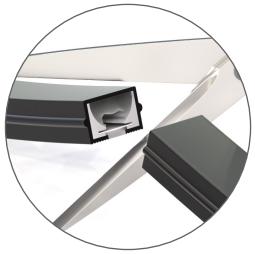

If your slat wall gap measures exactly 13mm the neon will hold in place by friction. Push the strip straight into the gap until it sits snugly.

Brackets fit

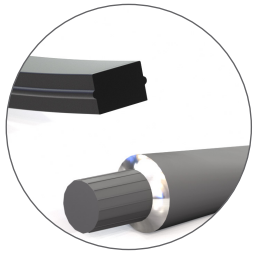

Use the supplied brackets for gaps larger than 13mm. Screw the brackets into place then push the neon into the clips.

Cutting To Your Desired Length

Cut it straight

Finish with end cap

When cutting ensure the power to the Neon is off. Always cut the neon straight across, not at an angle. Secure the end cap with silicone glue (not included) this helps to prevent light leaks.
