DARKMATTERS

102.283 DarkMatters Media Wall Dimmer Controller

Thank you for purchasing the VD1 (WT) 3-Button Dimmer, please read the instructions below to get the best out of your new product.

This simple to operate, hard wired controller from our DarkMatters range of products, allows you to switch on/off and dim your Media Wall Lighting.

The wired DarkMatters controller is a plug and play system and takes seconds to connect as each component links seamlessly into each other.

Features

- Plug & Play Operation
- Power On / Off & Dimming
- Push Button for Smooth Accurate Dimming Control
- Pairs to the optional single or multi-zone 2.4G Handsets
- Pairs to the Tuya Smart App
- Voice Control through Tuya Smart App

NEED AN EXTRA HAND?
Scan the QR code on the left and watch our instructional video all about to pair your remote with the controller

Set Up

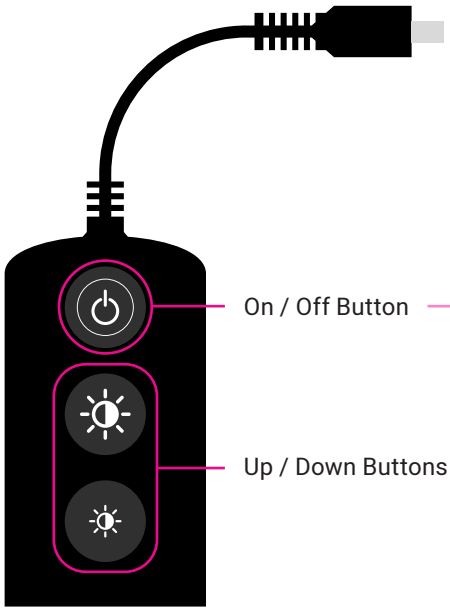

Plug the DarkMatters LED driver to the jack socket on the Wired Controller.

Connect the flying lead with attached jack plug, to the four-way cable splitter lead.

The four-way cable splitter lead can then be connected to up to four Neon Strips on your Media Wall.

The wired controller can be paired to the optional 2.5G single and multi-zone RF handsets and in addition, you can link it to the optional Tuya Application, allowing control from your smartphone or Smart Speaker.

Note: Two RF devices and the Tuya Application can all be connected to the hard-wired controller allowing control from multiple devices.

Manual Operation:

The controller features a power “On / Off” Button and two buttons for dimming up and diming down the lighting.

ON / OFF BUTTON
Press the “On / Off” button to switch the Media Wall on and off.

UP / DOWN BUTTONS
Press and hold the appropriate brightness “Up / Down” buttons to increase or decrease the lighting intensity of your media wall. You can also intermittently press either of these buttons to adjust the brightness of the Media Wall in small steps.

Note: The Brightness control buttons also are used to pair and un-pair the controller from the available wireless handsets and the Tuya Application.

102.283 DarkMatters Media Wall Dimmer Controller

Pairing / Un-Pairing a Handset & Tuya Application:

To pair an RF handset to the wired controller, there are two methods (see note below):

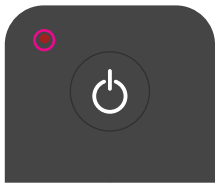

PAIRING

On the wired controller (102.283), press and hold down the Brightness "up & down" buttons together for 2 seconds, the connected lights will flash twice.

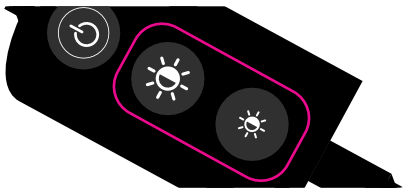

Immediately press the "On / Off" button on the handset twice in succession.

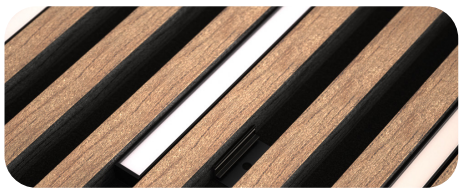

The connected lights will flash 3 times to indicate successful pairing.

UN-PAIRING

On the wired controller (102.283), press and hold down the Brightness "up & down" buttons together for 5 seconds.

The connected lights will flash 5 times. This will delete all paired remote controllers.

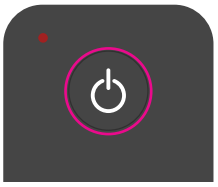

NEED AN EXTRA HAND?
Scan the QR code above and watch our instructional video all about to pair your remote with the controller

POWER RE-START METHOD

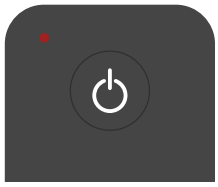

PAIRING

Turn off at the wall and on the wired controller (102.283) twice in succession (see note below).

Immediately press the "On / Off" key 3 times in succession on the handset.

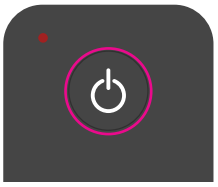

The LED Indicator will flash three times to indicate successful pairing.

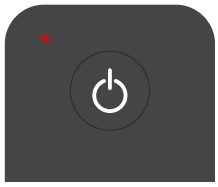

UN-PAIRING

Power off and on the wired controller (102.283) 5 times in succession (see note below).

Immediately press the "On / Off" key on the wired controller 5 times in succession.

The LED Indicator will flash 5 times to indicate successful unpairing.

PAIRING TO THE TUYA APPLICATION

Search and then download the Tuya Smart Application from your App Store, for IOS, go to the Apple App Store or for Android devices go to the Google Play Store. Alternatively, use the QR code to download it directly to your smart phone.

Open the Tuya App then follow the instructions on the App to make an account. Follow the instructions on the Tuya Application to add a new device, then follow the instructions details above for pairing the RF handsets, the pairing method is the same.

Tuya App

Note: When pairing or un-pairing a handset or the Tuya App, it is important to wait for 30 seconds between each "Pair / Un-Pair" operations. For the Power Re-Start method, make sure you wait for the connected lights to illuminate before powering off and on again. **Timing for this method is crucial.**
